PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 3+ years of hands-on experience designing and operating large-scale production systems using Java Spring Boot, React, and TypeScript. Proven track record of end-to-end delivery across AWS deployments, CI/CD automation, Redis caching, real-time WebSocket architecture, and JWT/OAuth2 security. Experienced integrating AI/ML technologies — including LangChain, RAG pipelines, and Whisper ASR — directly into production services. Currently completing a B.Eng. in Computer Science & Engineering at Sejong University, graduating August 2026.

WORK EXPERIENCE

Software Engineer

Mar 2025 – Mar 2026

Sellerket LTD — Seoul, South Korea

Full-time · 1 yr

- Led a zero-downtime migration of a legacy platform to a modern full-stack architecture using React 19 and Java Spring Boot.
- Architected and deployed GlobalSellerket (brand-influencer e-commerce) and SetlOne (social networking + fintech) platforms to AWS production.
- Maintained a PHP, Laravel flight booking platform, transformed it from local VPS to AWS and scaled.
- Built Agentic Automation tool for internal work optimization.
- Shipped cross-platform iOS and Android mobile apps from a single React codebase using Capacitor, cutting mobile delivery time significantly.
- Built production-grade pipelines: Spring Boot · JWT/OAuth2 RBAC · Redis caching · WebSocket real-time features · GitHub Actions CI/CD.
- Developed automated image and video generation tools for the marketing team; rapidly delivered multiple investor-facing MVPs.

Software Developer (Freelance)

2025 – Present

Asia Pacific Aviation — Seoul, South Korea

Freelance

- Designed and developed AirSeoul, a full-stack flight booking platform handling 50,000+ API requests per hour reliably.
- Eliminated concurrent booking race conditions through Redis rate limiting and REPEATABLE_READ transaction isolation.
- Implemented end-to-end security: JWT refresh token rotation, OAuth2 (Google), RBAC, CSRF/XSS/HSTS headers, and audit logging.
- Integrated TossPay payment gateway with idempotency checks and webhook signature validation; built admin dashboard and dynamic config.
- Set up full observability stack: Prometheus · Grafana · Loki + Promtail; containerized all services with Docker Compose.
- Connected to N8N automation for automated marketing.

KEY PROJECTS

AirSeoul — Flight Booking Platform

Dec 2025 – Present

Asia Pacific Aviation

Stack: Java · Spring Boot · React · TypeScript · MySQL · Redis · Docker · AWS · TossPay · Prometheus · Grafana

- Delivered PWA with i18n multi-language support, keyboard accessibility, and Flyway auto-migration.
- Introduced distributed tracing via Correlation ID for consistent cross-service log tracking.

Setlone — Social Networking + Fintech Platform

Mar 2025 – Present

Sellerket LTD · setlone.com

Stack: React 19 · Spring Boot · MySQL · Redis · AWS · Docker Compose · JWT/OAuth2

- Integrated real-time social feed and payment features in a unified platform; running on AWS production.
- Worked End to End from developing to DevOps production Environment.

GlobalSellerket — Brand & Influencer E-Commerce

Mar 2025 – Present

Sellerket LTD · shop.setlone.com

Stack: React (TypeScript) · Spring Boot (Java 17) · JWT/OAuth2 RBAC · Blockchain Payments · AWS · CI/CD

- Implemented blockchain-based payment module and full influencer-brand matching e-commerce platform end-to-end.
- Transformed from the old legacy plan PHP 7 to Java, Spring, Reactjs, Typescript, Tailwind based Monolithic Architecture.

Lecture2Notebook — AI Lecture-to-Notebook Converter

2024

Personal Project · Sejong University

Stack: FastAPI · Python · Whisper ASR · Groq API · LLaMA 3.1 · RAG · React · TypeScript · Docker

- Acquired 100+ real users; automated Agentic solution for conversion of lecture videos to structured Jupyter notebooks via Whisper ASR + RAG pipeline.

AiBuddy — AI-Powered Personalized Learning Agent

2024

Personal Project

Stack: Java · Spring Boot · LangChain4j · Ollama LLaMA 3.2 · RAG · Spring Security · OAuth2 · MySQL · Redis

- Designed local LLM + RAG architecture delivering personalized learning experiences; built and owned the entire backend from scratch.

EDUCATION

B.Eng. in Computer Science & Engineering

Mar 2021 – Aug 2026 (Expected)

Sejong University — Seoul, South Korea

TECHNICAL SKILLS

Languages	Java, Python, TypeScript, JavaScript, C, C++
Frameworks	Spring Boot, FastAPI, React.js, Spring Security, Spring AI, Capacitor
Databases	MySQL, MariaDB, PostgreSQL, Redis, ChromaDB
Infra / DevOps	AWS (EC2, S3, SSM), Docker, Docker Compose, GitHub Actions CI/CD, OIDC, NHN Cloud, Production Server Management

Security	JWT, OAuth2, RBAC, CSRF/XSS Defense, Audit Logging, Cloud Security
AI / ML	LLM, VLM, RAG, Multi-Agent Systems, LangChain4j, LangChain, LangGraph, Whisper ASR, AI Model Optimization
Monitoring	Prometheus, Grafana, Loki, Promtail
Other	REST API, Microservices (MSA), WebSocket, Apache Kafka, gRPC, Flyway, N8N, System Design, Open-Source Software, Linux

ADDITIONAL INFORMATION

Nationality	Bangladeshi
Date of Birth	March 12, 2002
Visa Status	D-2 (Student Visa) — E-7 work visa transition planned after graduation (August 2026)
Location	Gwangjin-gu, Seoul, South Korea
